

Enable wind power to generate electricity continuously

Overview

How can we maximise on excess wind energy?

There are a number of ways that we can maximise on excess wind energy: In order for homes and businesses to use cleaner, greener energy, more renewables – such as wind power and solar power – will need to be connected to the electricity grid.

How do wind turbines generate electricity?

The rising demand for wind energy typically results in the generation of high-quality output electricity through grid integration. More sophisticated contemporary generators, power converters, energy management, and controllers have been recently developed to integrate wind turbines into the electricity system.

How to advance wind energy?

On a parallel ground, advanced technological developments, reinforcement, and formations of suitable renewable energy support systems, large scale investments, subsidies, and long term planning are required for further advancement of wind energy. US Department of Energy. International energy outlook 2013.

Can wind energy be used as mechanical power?

Wind energy can be used either directly as mechanical power or indirectly by converting the kinetic energy of wind into electrical energy. The most important part of any wind energy system is the wind turbine, which converts wind energy into mechanical power that can be utilized in various applications.

Why do wind turbines need converters?

Converters continuously develop, resulting in notable performance enhancements for wind turbines that not only lower mechanical stress and

boost energy output but also allow the entire wind turbine (WT) to function as a fully controllable power source, significantly improving the integration of wind energy into the power grid .

How can wind energy be saved?

Energy storage (saving some energy for later when wind turbines are over-producing) and long-distance transmission (moving electricity from places with lots of wind to places with lots of demand) can help the energy system rely more heavily on wind power around the clock. Wind energy also needs wide stretches of open space.
