Overview

What is gas-liquid separation technology?

Gas-liquid separation technology holds diverse applications in geology and energy, particularly within oil and gas exploration, extraction, storage, and treatment. Firstly, in the extraction phase of oil and gas wells, crude oil and natural gas subsurface retrieval is often concomitant with significant water and impurities.

How does a gas separator work?

The structure includes a separation housing having an internal separation chamber in which a vane separator is rotationally mounted. The gas-liquid two-phase mixture is efficiently separated (separating the fluid into the gas and liquid components) by rotating the blade.

What is the separation effect of a gas-liquid separator?

With the decline of the guide vane number and the rise of the blade outlet angle, the separation effect of the gas-liquid separator is significantly improved. When the droplet size is more significant than $40\ \mu\text{m}$, the separation efficiency of the wall is up to 100% (Fig. 13 b).

What is the maximum separation efficiency of a gas-liquid separation device?

The separation performance of the device increases with the increase of the gas-liquid surface velocity. When the liquid surface velocity is $0.81\ \text{m/s}$, the maximum separation efficiency is 97%. Eulerian-Eulerian model/RNG $k - \epsilon$ model.

How to choose a gas separator?

The structure of the gas separator is the best when the thickness of the spiral plate is 3 mm, the number of threads is 3, and the screw distance is 60 mm. Gas volume fraction less than 1%. Study the effects of liquid concentration on liquid outlet pressure and separation efficiency.

What are the different types of gas-liquid separation technologies?

According to the separation mechanism, gas-liquid separation technologies can be divided into gravity sedimentation, inertia collision, filtration separation, centrifugal separation, T-junction dynamic separation, supersonic cyclone separation, and traditional natural gas dehydration technologies.
