

Overview

What is a glitter 811A battery spot welder?

The newly designed GLITTER 811A battery spot welder is equipped with six super capacitors for energy storage and power supply for pulse welding. Compared to a traditional AC spot welder, it does not interfere with the electric circuit, which means no more tripping problems.

Which welding pen is best for battery welding?

The well-designed and professional welding pen brings you great efficiency for battery welding work. The machine's super energy-gathered pulse welding technology combines with a max welding power of 36 KW to provide a reliable welding effect. 0.5mm nickel and 0.3mm copper (with flux) can be easily welded.

What is a super energy gathered pulse welding machine?

The machine's super energy-gathered pulse technology combines with a max welding power of 36 KW to provide a reliable welding effect.

Should you use a spot welder?

A spot welder can either be your best friend or your worst enemy. It all comes down to how you use it. If you are seeing large sparks flying when you are welding, that means the power is turned up way too high for the metal you are trying to weld. So, if you are welding thinner metals, make sure to turn the power down accordingly.

How much does a spot welder cost?

There are basically two types of spot welders on the market. Hobby welders and professional welders. A hobby spot welder costs anywhere between \$50 and \$150 dollars whereas a small-scale professional-grade welder can set you back \$300 to \$500.

Can a 811A battery pack be welded with 6000 a Max welding current?

The new 811A model is especially designed for the copper welding requirements. 0.3mm pure copper (with flux) can be welded with the 6000A max welding current, saving you the battery pack building cost and improving the battery pack performance.
