

Energy storage system economic analysis chart

Overview

What are energy storage cost metrics?

Cost metrics are approached from the viewpoint of the final downstream entity in the energy storage project, ultimately representing the final project cost. This framework helps eliminate current inconsistencies associated with specific cost categories (e.g., energy storage racks vs. energy storage modules).

Are battery energy storage systems becoming more cost-effective?

Loading. The recent advances in battery technology and reductions in battery costs have brought battery energy storage systems (BESS) to the point of becoming increasingly cost-

How to calculate energy storage investment cost?

In this article, the investment cost of an energy storage system that can be put into commercial use is composed of the power component investment cost, energy storage media investment cost, EPC cost, and BOP cost. The cost of the investment is calculated by the following equation: $(1) CAPEX = C_P \times Cap + C_E \times Cap \times Dur + C_{EPC} + C_{BOP}$.

What is an energy storage system?

For this report an energy storage system refers to stationary systems, but it's important to note that system integration for battery energy storage systems for ships, electric vehicles and other heavy-duty vehicles follows a similar process with similar components.

What are the different types of energy storage costs?

The cost categories used in the report extend across all energy storage technologies to allow ease of data comparison. Direct costs correspond to equipment capital and installation, while indirect costs include EPC fee and project development, which include permitting, preliminary engineering

design, and the owner's engineer and financing costs.

How are energy storage cost projections grouped?

The annual inputs are grouped into four sections, each spanning several rows. Energy Storage system: cost projections based on energy storage type and, where applicable, size (e.g. small vs large scale Li-ion systems). Split over eight capex categories and three opex categories, each with a 15-year forecast.
