

Fengjun 5 generator 4 plug exploded diagram

Overview

What is a 4 prong generator plug?

Secure the wires in place with the wire nuts. A 4-prong generator plug is a type of electrical connector that is used to connect a generator to a power source. The plug has four prongs, each of which is connected to a different wire. The wires are typically color-coded, so that you can easily identify which wire goes to which prong.

How should a generator be refuelled?

Always leave a least a 1M gap between the generator and any surrounding building or structures. Always ensure the generator is on a solid, flat surface. heat. 4. Never move or tilt the generator whilst it is switched on. Always switch the engine OFF when refuelling. Always refuel away from any source of heat.

What should I avoid when refueling a generator?

Never smoke whilst refuelling and avoid smoking or using a naked flame near the generator. Never start the engine if there is spilled fuel. Any spillage must be wiped clean and the generator allowed to dry before attempting to start the engine. Never use the generator in wet conditions unless it is well protected/ covered.

How do you connect a generator to an extension cord?

1. Strip the ends of the extension cord wires. 2. Connect the black wire from the extension cord to the black wire from the generator plug. 3. Connect the red wire from the extension cord to the red wire from the generator plug. 4. Connect the green wire from the extension cord to the green wire from the generator plug.

What should I do if my generator is overloaded?

NEVER use water or any other liquids to clean the generator. NEVER allow the

generator air vents to become blocked. Always ensure the applied load does not exceed the generator rating. Overloading the generator is dangerous and could cause serious damage. Always disconnect the generator when carrying out any maintenance.
