Overview

Who is Gemma power systems?

Gemma Power Systems, LLC, a wholly owned subsidiary of Argan, Inc. (NYSE: AGX), is a leading Engineering, Procurement and Construction (EPC) company. Gemma is led by a renowned team of professionals, each with extensive experience in the development, design, construction, commissioning and operation of large-scale power projects.

How many employees does Gemma power systems have?

Gemma Power Systems employs 125 permanent staff and more than 700 craft personnel. The company expands its capabilities into biodiesel and ethanol production facilities. Argan, Inc. acquires Gemma Power Systems and helps to enhance the company's balance sheet and ability to execute projects at an even higher level.

What is Gemma Renewable Power?

Gemma Renewable Power (GRP) is a company that specializes in the construction of utility scale wind and solar projects. Since its inception, it has successfully completed power projects in various locations, ranging from Massachusetts to Washington State. For more information about Gemma Power systems, visit .

What is the size of Gemma Power Systems' backlog?

Gemma Power Systems' backlog grows to more than \$800 million and later reaches \$1.4 billion, the highest level in the company's history. The company wins 3,000 MW of new projects and completes the construction of the first two U.S. installations of Siemens "H" class single shaft gas turbines.

What does 'built by Gemma' mean?

Gemma Power Systems' 'Built by Gemma' is our commitment to providing a great project experience for our customers, communities, and all

stakeholders. Gemma Renewable Power (GRP) specializes in the construction of utility scale wind and solar projects and has successfully completed power projects across the country, from Massachusetts to Washington State.

What is Gemma & how does it work?

It joins Mixtral from the French AI lab Mistral and Meta's Llama 2. Gemma is a much smaller language model than the likes of Gemini or OpenAI's ChatGPT but is available to install anywhere, including on your laptop — but nothing runs it as fast as the Language Processing Unit (LPU) chips that power the Groq interface.
