

Generator for a whole house

Overview

You will likely need at minimum a 10,000 Watt or 10kW generator to power a whole house. There are portable generators, that are cheaper than stationary home backup generators, in the 10,000 and 15,000 watt range. What is a whole house generator?

A whole house generator is a portable or permanently placed generator that supplies power to your home. While you can use them at any time, they usually activate when the power goes out due to a storm. These generators come in various sizes to power up small electronics such as cell phones up to larger generators that can power your whole house.

Can a generator power a whole house?

Large whole-house generators can power an entire average home, while smaller units provide power for key appliances. These are the best standby models from CR's tests.
