Modeling and Analysis of GMD Effects on Power Systems: An overview of

Geomagnetically induced currents (GICs), caused by geomagnetic disturbances (GMDs) (Figure 1), have the potential to affect the operation of interconnected electric power systems. There are two key risks associated with GICs in the bulk electric system. The first is the potential for physical damage to transmission system devices such as high-voltage (HV) transformers. The second ...

Dynamic Model of a 20-Bus Power System for HEMP/GMD ...

A high altitude electromagnetic pulse (HEMP) or solar-geomagnetic disturbance (GMD) has the potential to severely impact large-scale electric power grids. This is due to the introduction of low-frequency geomagnetically induced currents (GICs), which can saturate the magnetic core of power transformers and lead to distorted ac waveforms, increased losses, and the potential for ...
