

Going solar

Overview

How do I go solar?

Here's our quick guide to going solar. First, determine if you're a good fit based on your energy costs, home and roof setup, and location. Compare multiple quotes when going solar to find the right system at a competitive price.

Is going solar a good idea?

1. Determine your energy needs The first step of going solar involves determining your eligibility. If you don't use an excessive amount of electricity at home — or if your energy bills are already low — there's a chance going solar won't benefit you financially.

Does going solar cost a lot?

Thanks in part to Solar Energy Technologies Office (SETO) investments, the cost of going solar goes down every year. You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy.

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.

How do I get solar power?

Here are the steps to take to get powered by sunshine. Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar.

Should you go solar if you don't use a lot of electricity?

If you don't use an excessive amount of electricity at home — or if your energy bills are already low — there's a chance going solar won't benefit you financially. However, rising energy costs in the U.S. mean most homeowners are eligible for electricity savings with a photovoltaic (PV) system.
