

Handling a solar power station

Overview

What safety measures are needed for a solar power plant?

In this blog, we will discuss the key safety measures necessary for the safe operation and maintenance of a solar power plant. Personal Protective Equipment (PPE): Workers involved in the O&M of a solar power plant should wear the appropriate PPE to protect themselves from potential hazards.

How do you maintain a solar system at a height?

GIZ recommends that only GHS focal persons/certified electrician who have been trained to work at heights conduct all solar system maintenance at height. 1. Clean solar panel with soft cloth or soft mop and water anytime it is dirty. Do this when panels are cool and do not use soap/detergent for cleaning.

How to monitor a solar power plant?

Remote monitoring: A solar power plant constantly needs to be monitored to detect breakdowns and optimise its operation. The same function could be performed either on-site or remotely wherein we retrieve all the data either from the inverter or from communicating equipment (probes, meters etc.).

How do you maintain a solar array?

Consult equipment manuals for maintenance activities and intervals as required by manufacturer. Determine if any new objects, such as vegetation growth, are causing shading of the array and move them if possible. Remove any debris from behind collectors and from gutters.

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

How does solar work?

After solar energy arrays are installed, they must undergo operations and maintenance (O&M) to function properly and meet energy production targets over the lifecycle of the solar system and extend its life.
