## Overview

What happened in the history of solar energy?

We'll explore some of the biggest events that have occurred in the history of solar energy: Some of the earliest uses of solar technology were actually in outer space, where solar was used to power satellites. In 1958, the Vanguard I satellite used a tiny one-watt panel to power its radios.

When was solar energy invented?

In 1893, the photovoltaic (PV) effect was discovered; after many decades, scientists developed this technology for electricity generation . Based on that, after many years of research and development from scientists worldwide, solar energy technology is classified into two key applications: solar thermal and solar PV.

When was solar technology first used?

Some of the earliest uses of solar technology were actually in outer space, where solar was used to power satellites. In 1958, the Vanguard I satellite used a tiny one-watt panel to power its radios. Later that year, the Vanguard II, Explorer III, and Sputnik-3 were all launched with PV technology on board.

When did solar cell technology start?

The development of solar cell technology, or photovoltaic (PV) technology, began during the Industrial Revolution when French physicist Alexandre Edmond Becquerell first demonstrated the photovoltaic effect, or the ability of a solar cell to convert sunlight into electricity, in 1839.

How did solar technology develop in the 2000s?

This timeline lists the milestones in the historical development of solar technology in the 2000s. First Solar begins production in Perrysburg, Ohio, at the world's largest photovoltaic manufacturing plant with an estimated capacity of producing enough solar panels each year to generate 100

megawatts of power.

When did solar energy become a standard power system?

As NASA pushed further out into the solar system in the 1970s, photovoltaics became the standard power system for its spacecraft and remains so today. Back on Earth, solar energy technology continued to advance gradually through the mid-20th century but remained uncompetitive with cheap, readily available fossil fuels.
