

# **Hong Kong photovoltaic bracket ranking**

## Overview

---

Does Hong Kong have a solar PV system?

Currently, solar photovoltaic (PV) installation in Hong Kong is still limited. The Hong Kong SAR Government has estimated to have about 1-1.5% of electricity supply from solar PV by 2030. In order to meet this challenge, a detailed study on pe.

What is the PV capacity for Hong Kong's roofs & facades?

Assessed PV capacity for Hong Kong's roofs and facades using a bottom-up approach. Analyzed PV potential and variations across 180,349 buildings in Hong Kong. Installed PV capacities: 1.27 GW for roofs, 12.75 GW for facades in Hong Kong. Discussed technology and policy recommendations for enhancing urban PV integration.

How much energy does PV system use in Hong Kong?

According to the results of the Study, the total estimated installed capacity of PV systems was around 6.29 MW in Hong Kong as at end of March 2017. The estimated annual generated energy by PV systems was about 6.29 GWh, and accounts for about 0.014% of the annual electricity consumption of Hong Kong in 2016.

Can building-integrated solar PV systems help Hong Kong achieve a low-carbon future?

These projections account for 12.68%–16.32% of Hong Kong's total electricity consumption in 2022. This study underlines the substantial role of building-integrated solar PV systems in Hong Kong's transition towards a low-carbon future, offering valuable insights for policymaking and implementation strategies.

Can PV technology expand the scope of solar energy generation in Hong Kong?

These innovative applications of PV technology present an opportunity to broaden the scope of solar energy generation in Hong Kong. As the city explores ways to diversify its energy sources, the integration of PV technology across various sectors offers a strategic pathway to augment the city's renewable energy matrix.

Which roof area is not suitable for PV installation in Hong Kong?

According to a local study<sup>4</sup>, around one-third of the roof areas in Hong Kong is not worthy of installing PV systems. Those rooftop areas are of low solar irradiance, at perimeter zone of the building roof or pitched roof with slopes over 40°. Therefore, the roof area suitable for PV installation is estimated at around 25.7 km<sup>2</sup> 5.
