

Horizontal single-axis tracking of photovoltaic panels

Overview

Single axis tracking simply means there is one axis of rotation. The axis can be horizontal (most common), tilted, or even vertical. A horizontal single axis tracker is the most common configuration. What are examples of single axis solar trackers?

Examples of this type of solar tracking system in the literature include Horizontal Single-Axis Trackers (HSAT), Vertical Single-Axis Trackers (VSAT), Tilted Single-Axis Trackers (TSAT), and Polar-Aligned Single-Axis Trackers (PASAT) . Figure 3 depicts the various existing single-axis solar trackers. Figure 3.

What is vertical single axis tracking in photovoltaic system?

Lorenzo et al. (2002) designed the tracking of photovoltaic systems with a single vertical axis. The vertical single axis tracking also called as azimuth tracking is mainly used for the energy gain which can be 40% more compared to tilted static panels. This research work deals with the design of VSAT photovoltaic plant in Tudela.

What is horizontal single axis solar tracking system with astronomical tracking algorithm?

Horizontal single-axis solar tracking systems with Astronomical tracking algorithm are commonly used in photovoltaic (PV) installations. However, different algorithms can increase the PV installation's performance without implementing new equipment or technologies.

How are horizontal single-axis solar trackers distributed in photovoltaic plants?

This study presents a methodology for estimating the optimal distribution of horizontal single-axis solar trackers in photovoltaic plants. Specifically, the methodology starts with the design of the inter-row spacing to avoid shading between modules, and the determination of the operating periods for each time of the day.

What is a horizontal solar tracker?

The horizontal solar tracker has been developed and researched in the following countries: England, Spain, China, the USA, Iran, and Brazil. A tilted vertical single-axis solar tracker moves photovoltaic panels from east to west throughout the day. The system's design is simple and occupies a smaller working area compared to dual-axis trackers.

Can a dual axis solar tracker be used in photovoltaic systems?

Dual-axis solar tracker for using in photovoltaic systems. Poulek, V. (1994, December). Testing the new solar tracker with shape memory alloy actors. In Proceedings of 1994 IEEE 1st World Conference on Photovoltaic Energy Conversion-WCPEC (A Joint Conference of PVSC, PVSEC and PSEC) (Vol. 1, pp. 1131-1133).
