# **Household solar power generation is cost-effective**

## Overview

---

Current SEG rates are much lower than the retail price of grid electricity, so it's more cost-effective to use the energy you generate rather than sell it. Are residential solar panels worth it?

If you compare this to the average annual electricity consumption of a household, which is around 2,700kWh according to Ofgem, residential solar panels can cover 117% of your electricity demand in perfect conditions. Other factors that affect whether solar panels are worth it include the following:  
Performance all year round.

Do solar panels increase property value?

Solar panels are attractive to potential new homeowners when you next sell your home, which can increase your property value as a result. That might seem like a long time, but it's worth remembering that solar panels can provide all of your energy needs, making your home potentially energy self-sufficient.

How much do solar panels cost?

The price of a typical 3.5 kilowatt-peak PV solar panel system is about £7,000. Based on the Energy Saving Trust's figures, it could take someone living in the middle of the country, in a typical home, anywhere between 12 and 17 years to recoup the costs of installing panels, based on current Energy Price Cap rates.

Do solar panels generate electricity?

That said, the rate at which solar panels generate electricity varies depending on the amount of direct sunlight and the quality, size, number and location of panels in use. Even in winter, solar panel technology is still effective; at one point in February 2022, solar was providing more than 20% of the UK's electricity.<sup>1</sup>

Can you save money on solar panels?

Another option for solar panel funding is the new VAT reduction on energy-saving products, such as PV panels. This means that, until March 2027, you'll pay 0% on VAT to help homeowners transition to renewable energy. The average household could potentially see up to tax savings worth £2,850.

How efficient are solar panels in the UK?

Most domestic solar panels in the UK are around 15-24% efficient. If your available roof space is extremely limited, it's important to opt for the highest efficiency modules available. This ensures maximum energy generation to cover your entire energy load. The best solar panels in the UK come with efficiency rates exceeding 22%.
