

# How commercial solar power works

## Overview

---

Commercial solar panels work by utilizing photovoltaic cells to convert sunlight into electricity. These cells contain semiconductors that generate an electric current when exposed to sunlight. How does commercial solar power work?

Commercial solar power works by activating commercial PV panels when solar cells or the PV cells on the panels absorb sunlight. This phenomenon charges the PV cells and produces an electric current.

What is commercial solar energy?

Commercial solar energy, also known as photovoltaic (PV) energy, utilizes solar panels and systems to generate electricity for commercial, industrial, or municipal applications. Commercial solar systems are specifically designed based on a business's energy consumption and/or available space to install PV panels.

How do solar panels work?

Solar panels are incorporated into the commercial electricity network and placed on nearby lands, buildings, and roofs. The photovoltaic system, also referred to as a solar PV system, converts solar energy into electricity, which fulfills all the energy needs of the building.

What are commercial solar panels?

Commercial solar panels, also known as 'Commercial & Industrial-scale solar (C&I)', are photovoltaic panels that absorb sunlight for power generation. They are mostly grid-tied solar systems used to power office buildings, schools, warehouses, factories, and more.

What is a commercial solar PV system?

A commercial solar PV system uses solar panels installed on commercial buildings to harness solar energy and produce power. Depending on the size

of the installation, the power produced covers most of the company's energy requirements and can significantly lower energy costs.

How does a photovoltaic system work?

The photovoltaic system, also referred to as a solar PV system, converts solar energy into electricity, which fulfills all the energy needs of the building. You can obtain solar energy from solar panels throughout the year, particularly in the summer. You can also install storage systems to use power after sunset.
