

# How high should the photovoltaic panels be installed from the roof

**Higer conversion efficiency**

CAN/RS485/WIFI/4G  
Blue tooth communication

20 Kwh

30 Kwh

50 Kwh

Thick shell, well protection for inside cells

BMS customization supported

## Overview

---

Solar panels should be mounted at a height of 3.75" to 5.25" from the roof's surface to ensure optimal performance. How high should solar panels be on a flat roof?

On a flat roof, the highest part of the solar PV equipment should not be more than 600mm higher than the highest part of the roof (excluding chimney). In some cases, however, permitted development rights are more limited.

What angle should solar panels be installed on a roof?

Anywhere between 20 and 50 degrees will usually enable your system to produce roughly as much electricity as it could. And in the case of most rooftop solar panel installations, the angle of the solar panels is determined by the angle of the roof - so there isn't much you can do to change it.

How much do solar panels weigh on a flat roof?

Crucially, solar panels on a flat roof need a heavy ballasted mounting system to stay secure at the correct angle in high winds. However, a typical ballasted solar panel setup can weigh around 100kg per panel, compared to only around 20kg per panel for a non-ballasted system.

Can solar panels be mounted on a flat roof?

For solar panels on a flat roof, mounting systems are slightly different and can include a triangle 'ballast' box to support the panels. For solar thermal panels (with cells that use the sun's heat to warm water in a house) things are a little different.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can solar PV systems be installed on a pitched roof?

The guidelines also say that provision must be made for ventilation behind the solar PV modules to provide cooling. With the introduction of MCS012 in March 2012 we would now expect all MCS certified installers of solar PV systems to install solar PV systems on pitched roofs using only MCS012 certified roof fixings.
