Yes, wind power is 100% renewable. As long as the sun keeps shining and the wind keeps blowing, wind energy will never run out. No matter how much of it we use, we can't use it up. Is wind energy good for the environment?

Wind energy has many advantages including being cleaner and greener than most power sources.

What is wind energy & how does it work?

Wind energy is a form of renewable energy, typically powered by the movement of wind across enormous fan-shaped structures called wind turbines. Once built, these turbines create no climate-warming greenhouse gas emissions, making this a "carbon-free" energy source that can provide electricity without making climate change worse.

Why is wind power a good energy source?

Wind power has great potential as an energy source for several reasons: It's cheap. Wind farms are one of the cheapest sources of electricity today: just 1 to 2 cents per kWh. And because turbines don't require fuel, wind power is much more stable in price than fossil fuels.

Is wind power a sustainable option?

In 2015, China also surpassed the EU in the number of installed wind turbines and continues to lead installation efforts. Industry experts predict that if this pace of growth continues, by 2050 one third of the world's electricity needs will be fulfilled by wind power. Wind power offers a sustainable option in the pursuit of renewable energy.

Are renewables the first choice for a modern power system?

Renewables today are the first-choice option for a modern power system. Wind and solar are now competitive with conventional sources and commanded a high percentage of investments in renewable power. The cost of wind turbines has fallen by nearly 1/3rd since 2009 and that of solar photovoltaic (PV) modules by 80%.

How many kWh can a wind turbine produce a month?

In the right location, a single wind turbine can produce over 400,000 kWh of electricity per month. Finding the right spots to build new wind farms—while minimizing problems like bird deaths and disposal of turbine blades—will be a key to creating a clean energy future. What is wind energy?
