

# How long is the normal length of the wind blade

## Overview

---

Wind turbine blades range from under 1 meter to 107 meters (under 3 to 351 feet) long. How long is a wind turbine blade?

Wind turbine blades range from under 1 meter to 107 meters (under 3 to 351 feet) long. For example, the world's largest turbine, GE's Haliade-X offshore wind turbine, has blades up to (107 meters (351 feet) long! On the other hand, small commercial windmills can only be a few meters long.

How long is a wind turbine rotor?

Wind turbine blade length or wind turbine blades size usually ranges from 18 to 107 meters (59 to 351 feet) long. Depending upon the use of the electricity produced. A large, utility-scale turbine may have blades over 165 feet (50 meters) long, thus the diameter of the rotor is over 325 feet (100 meters).

How big is a wind turbine?

While traditional wind turbines were smaller, this era of technological advancements is presenting bigger and bigger turbines. These structures are very tall, some reaching over 280 meters (918.6 ft.). In addition, the blades are not a small feat either. One rotation from these blades can power over 350 houses.

How do wind turbine blade dimensions affect energy production?

The wind turbine blades are the elongated objects protruding from the center of the motor. They are anywhere from 50 meters to 120 meters (164 ft. to 393.7 ft.). Wind flows through the blade and decreases air pressure on the other side. Therefore, the blade dimensions play a big role in determining energy production.

What is a wind turbine anemometer?

The anemometer measures wind speed and transmits wind speed data to the controller. Most turbines have three blades which are made mostly of

fiberglass. Turbine blades vary in size, but a typical modern land-based wind turbine has blades of over 170 feet (52 meters).

How are wind turbine blades transported?

Wind turbine blades and wind turbine components are usually transported by ship, rail and truck. Once the wind turbine blades arrive at a shipping port they are unloaded onto the rail system or trucks to be taken to their destination.
