This document describes how to identify the manufacturing date of SolarEdge inverters. The manufacture date of SolarEdge inverters can be identified by decoding the four left hand digits of the serial number of the product. The serial number of the product, can be found on the information label attached to the product.

How do I register an inverter with a different serial number?

If you have an inverter with one serial number for the lower Communication Unit and a different number for the upper Power Unit, register your product using the serial number shown on the type tag of the CU (lower enclosure). Log in to Sunny Portal. Select " Configuration > Device overview".

Where can I find the second S/N code on my inverter?

The second S/N is found on the type tag located on the lower half of the inverter called the Connection Unit (CU). The PIC, RID and WPA2 codes are found on the Connection Unit type tag. 1. Use the serial number of the Connection Unit (CU), If you are submitting a case for inverter troubleshooting or device exchange. 2.

How many DC inputs can a solar inverter support?

Some solar inverters support multiple DC inputs, allowing you to connect several strings or arrays of solar panels. The maximum number of DC inputs specification informs you of the inverter's capacity to accommodate multiple inputs, which can benefit larger solar panel installations.

How to find inverter serial number in sunksynk connect mobile application?

On the mobile application: Another way of finding the inverter serial number is through the Sunksynk Connect mobile application, user need to search the plant through the plant name or by data logger's serial number and go to the equipment section, user can find inverter serial number there. Following is the image attached for the reference.
