

# How many rails are needed to lay photovoltaic panels flat

## Overview

---

Each row of modules requires two rails (top and bottom). This system, which has two rows of modules, requires four rails. How far apart should PV panels be mounted?

The following are answers to the most common questions that we receive about mounting the pv panels. The mounting rails should be spaced apart as above. For example, using a 1.6m high panel, the rails should be spaced approx. 0.8m apart and the panels should be clamped so that they overhang the rails by 0.4m at the top and bottom. MAX.

How do you attach solar panels to a flat roof?

There are many systems that can be used to attach solar panels to flat roofs. Mini rail systems are popular when fitting on box section metal roofs. These rails are screwed straight into the roof using self-tapping screws and, generally, hold one or two solar panels. For arrays with more panels the rails are connected using a mid-fixing section.

Can solar panels be mounted on a roof?

Naked have seen it all before and can help you find the perfect Solar mounting system to get your solar panels where you want them. We've all seen Solar PV panels mounted on people's roofs and on the roofs of businesses, so here's a rundown of the options to get them up there. By far the most common method for fixing Solar PV panels to a roof.

Can solar panels be placed in a rail-less system?

Solar panels can be placed in the way selected by installer, because they are not as limited in their positioning as they would be with the rails. The main downside of the rail-less system is the learning curve of the installation. This requires installers to be experienced in performing rail-less mounting systems.

How are solar panels secured to a metal roof?

Here the rails are secured to the ridges of a metal roof using self-tapping screws. The base of the rails has a waterproof membrane to ensure a secure weather seal. The Solar PV panels are then clamped to the rails, keeping the panels very close to the roof to minimize wind loading £63+VAT/panel.

How good is a rooftop solar PV array?

A rooftop solar PV array is only as good as the mounts and rails it sits upon. Below we have the latest updates from 16 manufacturers across residential and commercial & industrial solar mounting systems, and approaches vary greatly.
