

# How much current does 100w solar power generate

## Overview

---

The first factor in calculating solar panel output is the power rating. There are mainly 3 different classes of solar panels: 1. Small solar panels: 50W and 100W panels. 2. Standard solar panels: 200W, 250W, 300W, 350W, 500W panels. There are a lot of in-between power ratings like 265W, for example. 3. Big solar panel.

If the sun would be shining at STC test conditions 24 hours per day, 300W panels would produce 300W output all the time (minus the system 25% losses). However, we all know that the sun doesn't shine during the night (0% solar).

Every electric system experiences losses. Solar panels are no exception. Being able to capture 100% of generated solar panel output would be perfect.
