

# **How to adjust the double-column rack of photovoltaic panels**

## Overview

---

What is a solar racking?

The solar rack is the hardware under the solar module that secures the panel to a surface (roof, ground, pole) in the panel installation. If you don't get this right, then forget it—you are just buying yourself years of trouble. In this learning article, we will focus on how to select the proper solar racking.

How to choose a solar rack?

The first step in evaluating which solar rack to use, you must first evaluate the space available for the home solar panels. Either on the roof, on the ground or on a pole, you need to know the square footage before you begin the selection process. Measure the length and width of the surface on which you intend to place the solar panels.

What makes a solar panel racking system different from a rail system?

Heavier — these setups are far heavier than their rail-free counterparts.  
Flexibility — the rail system doesn't lend itself to simple, modular installations. This solar panel racking mounts a row or multiple rows of PV modules to the ground.

Do solar panels need to be adjusted?

However, you can also buy racks specifically for solar panels that don't need much adjusting. Ultimately, it depends on the manufacturer of your solar panels and whether they make them. The actuator is what lifts the solar panels into the air. It's the motorized portion that you can frequently activate via remote.

How long does it take to install a solar racking system?

SolarTown offers all the necessary clamps or cap strips to support your installation. The installation of your solar energy system for your home is going to take 1 or 2 days and you will enjoy solar energy for 25 years or more.

But you need to put in the time to design your system, and the solar racking is a critical component of your system.

How do solar panels rotate?

The rotation between the frames allows the solar panel to tilt. The brackets are the lift frame and securely fasten the solar panel to the surface to which it is attached. Everything is attached to the brackets, the solar panel, actuator, rotation pin, and whatever else the kit might have.
