

How to calculate the quality of photovoltaic inverters

Overview

Do PV inverters affect power quality?

Power quality aspects of PV inverters The impact of PV inverters on the quality of injected power into the grid is the subject of several research studies, which mainly explore the power quality (PQ) parameters such as harmonic distortion and power factor of PV inverters.

Are power quality parameters a function of PV inverter?

This research presents and investigates the experimental measurements of power quality parameters in-field on 8 kWp PV system connected to the LV distribution network in Electronics Research Institute, Egypt. Also, This research aims to investigate unity power factor and constant reactive power as two different functions of the PV inverter.

What is power quality analysis in a PV inverter?

The power quality analysis has been conducted in the P.V. inverter with both the modes. The voltage THD value is always being within permissible limits (0.15%). The current THD value also is within the limits of 2.56% during reactive power consumption/ injection mode. In UPF, it is noted that the THD is slightly higher than the reactive power mode.

What is a solar PV inverter?

The solar P.V. inverter is taken for study for active and reactive power capability during day time. The inverter is also operated at VAR mode alone when the P.V. power is unavailable. The P.V. energy system is simulated in the MATLAB Simulink platform, and its various characteristics have been analyzed.

Does a PV inverter have a reactive power capability?

According to the voltage regulation requirements presented by German standards VDE-AR-N 4105, inverters have to provide reactive power capability

at full load (Bayer et al., 2018). The reactive power capability depends on the PV inverter apparent power rate and the active power generated using the PV array.

How was field measurement data recorded in a PV inverter?

Field measurement data were recorded using the power quality analyzer CA8335. Statistical analysis of each harmonic, power factor and total harmonic distortion are analyzed and presented under different loading conditions and two different functions of the PV inverter.
