## Overview

---

There are two types of inverters used in PV systems: microinverters and string inverters. Both feature MC4 connectors to improve compatibility. In this section, we will explain each of them.

Planning the solar array configuration will help you ensure the right voltage/current output for your PV system. In this section, we explain what these items are and their importance.

Now, it is important to learn some tips to wire solar panels like a professional, below we provide a list of important considerations.

Up to this point, you learned about the key concepts and planning aspects to consider before wiring solar panels. Now, in this section, we provide you.

What is a solar panel string?

The “solar panel string” is the most basic and important concept in solar panel wiring. This is simply several PV modules wired in series or parallel. Solar panels feature positive and negative terminals. Wiring solar panels in series means wiring the positive terminal of a module to the negative of the following, and so on for the whole string.

How do you connect solar wire strings to a solar power inverter?

It’s possible to connect the solar wire strings to the solar power inverter in numerous ways. The following are the most popular connectivity options: The node string method. The DC combiner box. A direct connection. AC connection cable.

How do you string solar panels in series?

Stringing solar panels in series involves connecting each panel to the next in a line (as illustrated in the left side of the diagram above). Just like a typical battery you may be familiar with, solar panels have positive and negative terminals.

How do you wire solar panels in series?

Wiring solar panels in series involves connecting each panel to the next in a line (as illustrated in the diagram above). Just like a typical battery that you may be familiar with, solar panels have positive and negative terminals.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

What are the different types of solar panels wires & connectors?

When wiring solar panels, there are very specific types of cables and connectors that you'll need to get the job done successfully. These include: PV Wire or Solar Cable: These are used to interconnect the solar panels which we have also referred to as stringing.
