

How to contribute to the Power Grid Weibo

Overview

Does the government use Weibo?

While Weibo has successfully exposed scandals and mobilized opinions that challenge the power abuse or non-transparency of the officials, the government is also using Weibo in the service of its own purposes (Sullivan, 2014). Weibo is also seen as a contentious space between official authorities and individuals (Nip & Fu, 2016).

How can grid operators use flexibility services?

Grid operators could use flexibility services to offer a more reliable, stable power supply to consumers by balancing supply and demand on the power grid in real time, reducing the need for higher-cost and higher-emitting peaking power plants.

Why is China's power grid creaking?

China's creaking grid represents a major constraint to progress on its green energy transition. During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase.

What is Weibo & how does it work?

Weibo was launched in August 2009 as the micro-blogging service of Sina.com, one of China's leading technology companies. It has since played an essential part in the public life of the Chinese people, reflecting China's socio-political transition in the post-Olympics decade.
