## Overview

---

How do solar panels generate electricity?

Outside the metal frame you can find the junction box and wiring which allow you to connect the panel to external wiring. This is where electricity generated by the panel flows into an electrical system of a home or a power grid. Now that you understand how solar panels are constructed, let's dive into how they generate electricity.

How do solar panels convert sunlight into electricity?

Solar panels convert sunlight into electricity through a process called the photovoltaic effect. In this process, sunlight charges the electrons in a solar panel, creating an electrical current that can then power an electrical appliance. What are solar panels made of?

A panel comprises 60-72 solar cells.

How do solar cells produce electricity?

Solar cells convert the light from the sun into electricity. Many solar cells can be put together to make a solar panel. Solar cells are made from a material called silicon. – Solar panels are used to produce electricity. They can be found on buildings but can also be used on a solar farm to harvest the power of the sun.

How do solar panels work?

When sunlight hits layers of silicon inside solar cells, an electric charge builds up, creating a flow of electricity. Solar panels are mainly located on the roofs of homes and buildings and can generate electricity and heat water free of charge. In the Northern Hemisphere (including Scotland) solar panels work best when they face south.

How do solar farms work?

Solar farms are large areas of land that can be covered with thousands of solar panels that generate lots of electricity. Some solar farms have fixed solar panels that always face the same direction. Some have moving panels that turn so that they always directly face the Sun. This helps them generate as much electricity as possible.

Do solar panels generate electricity at night?

Solar panels generate no electricity at night time. Solar panels can't store energy, so you have to use the electricity they generate when the sun is shining. You need batteries to store the energy generated. These are expensive. - Solar cells convert the light from the sun into electricity.
