

How to install photovoltaic brackets and panels

Overview

Before you start, you want to know a few things. Those include: 1. How much sun do you get per day or on average 2. Whether you want to install the system on a building or a platform 3. Whether you need a solar professional or electrician 4. If you DIY, will it void the warranty?

These points help to reduce the risk of problems.

You can install solar panels on your home yourself. You will need some electrical wiring experience, and we suggest that you also use a professional solar contractor or electrician to do the wiring and connection processes.

It is not overly difficult to install solar panels. They fit onto a frame and then are fastened into place. However, installing the entire solar array can be more challenging, especially if you do not have electrical wiring.

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted, a roof racking system is first installed. A.

The Goal - Is to find the best location for the array to receive the most sun and the best quality sunlight. That ideal location may be the roof of your house, garage, or barn, or it may be on a platform on the ground. For most areas, a.
