How to install solar panels on a balcony?

A reliable mounting system is crucial to safely and securely install solar panels on your balcony. The mounting system must be able to withstand weather conditions while keeping the panels in the optimal position to capture sunlight.

How do balcony solar panels work?

The most fundamental component of a balcony solar system is the solar panels, which capture sunlight and convert it into direct current (DC) electricity. For balcony setups, it's practical to choose smaller, more manageable panels that can either be mounted on balcony railings or placed on stands.

How much do balcony solar panels cost?

Installing balcony solar panels that are connected to the home's electrical system costs around £1,405 for two 350 W panels – most balconies won't have room for more than this. Are there any grants for balcony solar panels?

.

How many solar panels can be installed on a balcony?

People with particularly large balconies might be able to fit two 400 watt (W) panels, whereas the average roof will fit 10 350 W panels. Fewer panels also mean less electricity being generated. Most homeowners won't be able to power their whole home with balcony solar panels.

Can solar panels be installed on a south-facing balcony?

South-facing balconies receive the most hours of sunlight, allowing panels to produce more electricity than if they faced in another direction. Solar panels on east or west facing balconies will benefit from direct sunlight in the

morning or afternoon respectively, so they are still viable.

Are plug-in balcony solar panels a good option?

Plug-in balcony solar panels can be a great option for people living in flats or rented accommodation. They aren't as expensive as regular roof-mounted systems, and they can still save you a little on your electricity bills. If you'd rather get solar panels professionally installed, we can help.
