For more information, check out our guide to home battery storage without solar in the UK. Can you add a solar battery to an existing solar panel system?

Can I add a solar battery to an existing solar panel system?

You can add a solar battery to an existing solar panel system. However, it'll usually cost more than having a battery installed at the same time as your panels. For example, you'll pay about £5,000 to add a 5kWh battery to an existing system - or just £2,000 if you get the entire solar & battery system in the same installation process.

How do I install a solar battery system?

The process primarily involves connecting and configuring the solar battery system via your solar inverter, which rarely requires disconnecting your existing power source. Your installer will ensure that the transition is seamless, allowing you to enjoy uninterrupted electricity while your solar battery system is being set up.

Can you add a battery to a solar inverter?

It's relatively easy to add a battery to your existing solar panel system, but the level of ease depends on the type of solar inverter you have. If your inverter isn't compatible with a battery, the simpler and more affordable

solution is to install an AC-coupled battery system.

Are solar batteries compatible with existing solar panels?

Most solar batteries designed for small-scale use are compatible with existing solar panel systems. The best battery for your retrofit installation really comes down to your unique needs and reasons for installing an energy storage system.

Should I install a solar battery?

Installing a solar battery is a great way to maximise the benefits of your solar panels, as it stores the excess energy generated. Think of it as having a power bank for your home.
