

How to press the two ends of the photovoltaic panel tightly

Overview

There are two types of inverters used in PV systems: microinverters and string inverters. Both feature MC4 connectors to improve compatibility. In this section, we will explain each of them.

Up to this point, you learned about the key concepts and planning aspects to consider before wiring solar panels. Now, in this section, we provide you with a step-by-step guide on how to wire.

Planning the solar array configuration will help you ensure the right voltage/current output for your PV system. In this section, we explain what these items are and their importance.

Now, it is important to learn some tips to wire solar panels like a professional, below we provide a list of important considerations.

How do you wire solar panels in series?

To wire your solar panels in series, simply link the positive MC4 connector of the first solar panel to the negative MC4 connector of the next one, and continue this pattern for the remaining panels. Once you're finished, you'll have two unconnected terminals at each end of your series—a positive and a negative.

How do you wire solar panels in parallel?

For instance, if you have three solar panels, you'll need a pair of 3-to-1 MC4 branch connectors. To wire four solar panels in parallel, use a pair of 4-to-1 MC4 branch connectors. Now, to wire my two solar panels in parallel, the initial step was connecting the fuses to the positive leads of the solar panels. Read more about fusing solar panels.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

How do you string solar panels in series?

Stringing solar panels in series involves connecting each panel to the next in a line (as illustrated in the left side of the diagram above). Just like a typical battery you may be familiar with, solar panels have positive and negative terminals.

Do solar panels come with a solar connector?

Solar panels do not always come with the solar connector attached. Attaching a solar panel connector to a PV wire is a two-step process: (1) crimping and (2) tightening the connector, to do this you require a wire stripper, crimping tool, and a solar panel connector assembly tool.

How do I change a solar panel connector?

To change a solar panel connector, you'll first need to ensure safety by disconnecting the panel from any power source. Cut the old connector off using a wire cutter, then strip about 15mm of insulation from the wire end.
