Overview

How to transport a wind turbine blade?

It takes a lot of planning on the side of your logistics company to transport one big wind turbine blade. A wind turbine blade trailer may need the use of a multi-axle trailer to transport such long, hefty blades. This will be the wisest option since a commercial wind turbine can take up to seven rigs just to complete a delivery.

What is a wind turbine blade transport trailer?

How are wind turbine components transported?

Wind turbine components can be transported using various transport modes, including ship, rail, and truck. When it comes to building new wind farms and turbines, most of the assemblages that comprise the wind generator must be delivered on trucks at some stage during the transportation process.

How are wind turbine blades delivered?

With wind turbines, it must be delivered to the wind farm site from the port of entry or the manufacturer. Some parts even need to be disassembled for shipping. However, the blades must be delivered in one piece. On average wind turbine blades' size are 116 feet in length. They are still manageable for

truck transportation at this length.
