Overview

What is renewables 2023?

Renewables 2023 is the IEA's primary analysis on the sector, based on current policies and market developments. It forecasts the deployment of renewable energy technologies in electricity, transport and heat to 2028 while also exploring key challenges to the industry and identifying barriers to faster growth.

What is IEA ewables 2023?

ewables 2023 Documentation INTERNATIONAL ENERGY AGENCY The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency.

How many GW of renewable electricity are there in 2023?

Renewable electricity capacity additions reached an estimated 507 GW in 2023, almost 50% higher than in 2022, with continuous policy support in more than 130 countries spurring a significant change in the global growth trend.

How fast did renewable capacity additions grow in 2023?

Global annual renewable capacity additions increased by almost 50% to nearly 510 gigawatts (GW) in 2023, the fastest growth rate in the past two decades. This is the 22nd year in a row that renewable capacity additions set a new record.

Which energy sources surpass nuclear electricity generation in 2025 & 2026?

Wind and solar PV each surpass nuclear electricity generation in 2025 and 2026 respectively. In 2028, renewable energy sources account for over 42% of global electricity generation, with the share of wind and solar PV doubling to 25%. IEA. Licence: CC BY 4.0.

Which energy generation surpassed hydropower in 2024?

In 2024, variable renewable generation surpasses hydropower. In 2025, renewables surpass coal-fired electricity generation. In 2025, wind surpasses nuclear electricity generation. In 2026, solar PV surpasses nuclear electricity generation. In 2028, solar PV surpasses wind electricity generation.

iea renewables 2023

Executive summary - Renewables 2023 - Analysis

Renewables 2023. Executive summary. 2023 saw a step change in renewable capacity additions, driven by China's solar PV market. Global annual renewable capacity additions increased by ...

Renewables 2023

Renewables 2023 is the IEA's primary analysis on the sector, based on current policies and market developments. It forecasts the deployment of renewable energy technologies in electricity, transport and heat to 2028 while also exploring key challenges to the industry and identifying barriers to faster growth.

Pathways for the energy mix - World Energy Outlook 2023

Solar PV is the clear frontrunner, but wind also scales up despite near-term supply chain challenges, while nuclear power, other renewables and low-emissions fuels all make progress ...

[World Energy Outlook 2023 - Analysis](#)

The World Energy Outlook 2023 provides in-depth analysis and strategic insights into every aspect of the global energy system. Against a backdrop of geopolitical tensions and fragile energy markets, this year's report explores how structural shifts in economies and in energy use

are shifting the way that the world meets rising demand for energy.

Executive summary - Renewables 2024 - Analysis

The pace of renewables growth in transport, industry and buildings doubles to 2030 compared with the rate from 2017 to 2023. For transport, renewable electricity accounts for half of this growth, led by electric vehicle adoption and followed by biofuels, with small contributions from biogases, hydrogen and e-fuels.

[Electricity - Renewables 2023 - Analysis](#)

Renewable electricity capacity additions reached an estimated 507 GW in 2023, almost 50% higher than in 2022, with continuous policy support in more than 130 countries spurring a ...

Renewable electricity capacity forecast revisions, 2023-2027

Renewable electricity capacity forecast revisions, 2023-2027. Last updated 11 Jan 2024. Download chart. Cite Share. IEA (2024),, IEA, Paris [https:// ...](https://...)

[Renewables 2023: Key findings](#)

Renewables 2023, released on 11 January, provides detailed country-level analysis on the progress towards the global tripling target. Alongside the report, an online dashboard is also available, which maps all the relevant data to measure renewable energy deployment through 2028.

Executive summary - Renewables 2023 - Analysis

Global annual renewable capacity additions increased by almost 50% to nearly 510 gigawatts (GW) in 2023, the fastest growth rate in the past two decades. This is the 22nd year in a row that renewable capacity additions set a new record. While the increases in

Renewables Market Update

The Renewables Market Update will provide the IEA's latest assessment of the state of play in renewables markets since the publication of our Renewables 2022 annual market report in December. The update will look at key topics for renewables this year and next

'Spectacular' growth in renewables in 2023 keeps ...

Global renewable energy capacity grew by the fastest pace in the last 20 years in 2023, which could put the world within reach of meeting a key climate target by the end of the decade,

IEA Market Report Series Renewables 2023 Documentation

IEA Market Report Series - Renewables 2023 Documentation Overview This document provides information regarding the dataset for Renewables 2023: Analysis and Forecast to 2028. This ...

Heat - Renewables 2023 - Analysis

Renewables 2023 - Analysis and key findings. A report by the International Energy Agency. Industrial heat demand is projected to expand 16% (+17.6 EJ) globally during 2023-2028, with China and India together accounting for more than half of the growth.

Global overview - Renewables 2024 - Analysis

Renewable energy consumption in the power, heat and transport sectors increases near 60% over 2024-2030 in our main-case forecast. This increase boosts the share of renewables in final energy consumption to nearly 20% by 2030, up from 13% in 2023.

Renewables 2023: Key findings

Renewables 2023, released on 11 January, provides detailed country-level analysis on the progress towards the global tripling target. Alongside the report, an online dashboard is also available, which maps all the relevant data to measure ...

Renewables 2023 Dataset

Renewables 2023 includes a data dashboard which enables users to explore historical data and forecasts for the electricity, biofuels for transport and heat sectors. Renewables 2023 dataset gives full access to all the data in Excel format, plus additional premium data for the electricity sector, including additional historical years.

Executive summary - Renewable Energy Market Update

Renewable Energy Market Update - June 2023 - Analysis and key findings. A report by the International Energy Agency. European countries introduced more policy and regulatory changes to ease permitting in the last 18 months than over the entire previous decade.

[Electricity - Renewables 2023 - Analysis](#)

Renewable electricity capacity additions reached an estimated 507 GW in 2023, almost 50% higher than in 2022, with continuous policy support in more than 130 countries spurring a significant change in the global growth trend. This worldwide acceleration in 2023

Renewable Energy Progress Tracker - Data Tools

Renewables 2024 includes this dynamic data dashboard which enables users to explore historical data and forecasts for all sectors and technologies. The associated Renewables 2024 dataset gives full access to all of the data available in this dashboard for the Renewables 2024 forecast, plus additional premium data for all sectors and technologies, including ...
