Overview

The production of a considerable amount of CO₂ is the consequence of the generation of the I.

As mentioned in the introduction of this chapter, the costs of photovoltaic energy are still too large in comparison with those of conventional energies. Cost reduction can be obtained.

Organic solar cells (OSC) have received increasing attention over the past few years. Indeed, the materials used in the photovoltaic polymer domain offer many practical advantages.

In the past decade, all of the thin-film photovoltaic technologies have demonstrated impressive increase of record efficiencies owing to improved basic understanding of.

In recent years, dye-sensitized solar cell (DSSC) technology has attracted a lot of attention. A DSSC solar cell is not based on the classical p-n configuration; in fact, its behavior mimics.
