## Overview

---

What type of fixing system is used for solar PV panels?

The type of fixing system used will depend on whether the solar PV panels are going to be: ground mounted. Solar PV panels can be retrofitted onto an existing roof, on top of the tiles or other roofing materials, using roof anchors (also called roof-hooks or brackets), mounting rails and clamps.

How do solar PV roof fixing systems work?

Get more information about solar PV roof fixing systems at the Ecofirst website. Solar PV tracking systems move the PV panels to track the sun, and are claimed to produce up to 30 per cent more electricity than a static array. The downside is the additional cost.

How do I install a solar photovoltaic system?

The most efficient way to install a solar photovoltaic system is by using a Heliomotion. Simply because a Heliomotion has innovative sun-tracking technology that enables solar panels to track the sun throughout the day and year. The possibilities for mounting solar are endless.

How does a PV system work?

How to make sure power is always flowing where it should When operating a PV plant, the goal is to of course get as much solar energy onto the grid or the connected load. In a PV only installation, this is generally a straight forward process. The sun hits the solar panels which in turn push energy through conduit through an inverter.

Are interlocking PV tiles rain-resistant?

For interlocking PV tiles, providing the PV tile side and head locks are designed correctly, then the interlocking PV tiles should be as rain-resistant as the existing roof covering and providing the interlocks are compatible with the existing roof tiles, then they should not leak at the interfaces with the existing

tiles.

Can solar PV systems be installed on a pitched roof?

The guidelines also say that provision must be made for ventilation behind the solar PV modules to provide cooling. With the introduction of MCS012 in March 2012 we would now expect all MCS certified installers of solar PV systems to install solar PV systems on pitched roofs using only MCS012 certified roof fixings.
