

# Installation of photovoltaic panels on indoor roof

## Overview

---

Can solar panels be installed on a roof?

"The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Where should solar panels be installed?

The best position for a solar panel installation is on a south-facing section of your roof at a 30°-40° angle. Make sure to have a professional assess your roof to ensure that your integrated solar panels can be installed adequately for optimal performance.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

How do roof-integrated solar panels work?

Technically, roof-integrated solar panels function just like traditional solar panels or solar roof tiles, using photovoltaic cells to convert sunlight into electricity. However, instead of sitting on top of the roof on visible brackets that can affect your home's aesthetic appeal, they become a part of the roof structure itself.

Are in-roof solar panels better than traditional solar panels?

In-roof solar panels are aesthetically pleasing and seamlessly blend with the roofline. However, their efficiency is usually 5-10% lower than regular solar panels. Do traditional solar panels look bulky and less attractive?

Then, consider installing integrated solar panels instead.
