

Installation specification of round pier photovoltaic panels

Overview

What are the requirements for a solar array mounting system?

The solar array mounting system and connection must be provided with a minimum manufacturing warranty of 10 years. The system must comply with AS/NZS 5033 and Clean Energy Council Installation guidelines.

Who is required to install a solar PV system?

All installation work must be performed by accredited CEC installers and documentation proving such accreditation must be submitted to the University. Electrical design of the system must be completed and signed off by an accredited solar PV designer accredited with the CEC.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:.

What are the different types of PV installation?

There are two main types of PV installation: integrated into the roof surface, often referred to as Building-Integrated Photovoltaic (BIPV) systems or mounted above the existing roof covering, also referred to as stand-off systems.

What are the requirements for a PV installation?

Virtually all domestic PV installations will fall under the scope of Part P. Part P requires the relevant Building Control department to be notified and approve the work. There are two routes to comply with the requirements of Part P: Notify the relevant Building Control department before starting the work.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.
