

# Installing photovoltaic roof shingles

## Overview

---

How do I get a solar shingle roof?

Whether you want a solar shingle roof or regular old solar panels, the best way to start shopping is to sign up on EnergySage to compare solar quotes from local companies for free. All it takes is an email address, and we'll help connect you with pre-screened, vetted companies in your area.

Are solar shingles a building-integrated photovoltaic?

Like solar panels, they absorb sunlight and convert it into electricity for your home. Solar shingles are categorized as building-integrated photovoltaics (BIPV), which are solar products that replace conventional building materials such as asphalt shingles or glass windows.

Can solar shingles be installed on a roof?

Rather than using mounting hardware to install solar shingles on top of your roof like panels, the shingles are part of your roof, replacing traditional asphalt or slate shingles. Since they're designed to look and function like conventional roofing materials, solar shingles tend to blend in more than panels.

What is a solar roof shingle?

The technology, also known as solar roof tiles, was pioneered by Dow Chemical and further innovated by Tesla. A solar shingle is meant to provide homeowners with an affordable, aesthetically pleasing solar energy panel that doubles as a weatherproof, protective roof shingle.

Can solar shingles be used as a power source?

All solar shingles are designed to function as both roofing materials and power sources, but they can achieve that dual purpose in a few ways. Some solar shingles use silicon as a semiconductor, as do most conventional solar panels. Others rely on thin-film solar cells, which feature super-thin layers of certain photovoltaic materials.

What are solar shingles & solar tiles?

Also known as solar shingles or solar tiles, this is an alternative to traditional rooftop solar panels – instead of placing panels on top of your existing roof, you can replace your roof shingles or tiles with a dual-purpose photovoltaic roofing material that both provides shelter and generates electricity.
