

# **Invest in solar power stations in the northwest**

## Overview

---

How many PV power stations are there in the northwest?

Of the 309 PV station clusters (hereafter, PV parks), the top 7% largest ones account for 61% of the total area of PV power stations, indicating that PV power stations in the Northwest tend to be developed in the form of large-scale centralized PV parks.

What land is used for PV power stations in China?

Land used for PV power stations were mainly converted from Gobi desert, sandy land, sparse and moderate grassland. The focus of China's PV industry is shifting from the northwest to the south and east. Many leading countries are boosting renewables, especially solar energy, as a major way to mitigate future energy crises and climate change.

Where can I find electricity north west's business plan?

After more than three years of planning and preparing, we're excited to get the shovels in the ground and put the plans into action. Electricity North West's full business plan can be found at .

What's new at electricity north west?

The plan, which has been approved by industry regulator Ofgem, will see Electricity North West invest in world-leading innovation and technology and enable it to continue to be the most digital network operator in Europe.

Why are PV power stations growing in China?

Energy policies are the main factor driving the rapid development of PV power stations in China (Fig. 10 a) (Yang et al., 2020). Since 2004, China's PV production has experienced tremendous growth due to the dramatic increase in demand for PV in European countries and reached number one in the world in 2007 (Xu, 2016).

Why are PV power stations growing so fast?

The rapid expansion of PV power stations within the past few years was mainly driven by national renewable energy policy. However, this rapid expansion of PV power stations also raises many problems such as low utilization and land-use changes.
