Can solar panels be installed on a commercial roof?

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

Can you install solar panels on a flat roof?

Ballast systems are simply a weighted racking setup that holds solar panels in place. If you need to drill into your flat roof to install solar panels, don't worry - your solar installer will ensure that the holes they drill are as small as possible and sealed correctly to avoid roof damage or leaking. Can you install solar panels on wooden roofs?

.

Which roof is best for solar panels?

No one type of roof is best for solar panels - mounting solutions exist for just about every roof out there. Some roofs will cost more to mount solar panels on. This is due to the different equipment installers need to use. Start comparing customized solar quotes today on the EnergySage Marketplace.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can you put a solar panel on a thatched roof?

Thatched roofs are not suitable for solar panels. There's no mounting system designed for thatch, which wouldn't be ventilated well enough underneath the panels and so would rot. And given that thatched roofs already present a fire risk, putting an electrical system on top wouldn't be sensible!
