

# **Is it okay to put solar panels on the balcony**

## Overview

---

Can you put solar panels on a balcony?

The main disadvantage of having solar panels on a balcony is that you can't fit as many solar panels on a balcony as you could on a roof. People with particularly large balconies might be able to fit two 400 watt (W) panels, whereas the average roof will fit 10 350 W panels. Fewer panels also mean less electricity being generated.

Are balcony solar panels a good investment?

These panels are designed to capture sunlight efficiently, even in limited spaces. This means you can generate a significant amount of electricity from your balcony, helping to power your home while reducing your reliance on conventional energy sources. Another key benefit is how balcony solar panels optimise your available space.

Do solar panels work on balconies?

Solar panels on balconies can work well, as long as nothing is obstructing light from reaching the panels. For example, balcony walls, nearby trees, or buildings can cast a shadow on the solar panels and reduce their electricity output. The angle and direction the solar panels will also affect their output.

Can solar panels be installed on a south-facing balcony?

South-facing balconies receive the most hours of sunlight, allowing panels to produce more electricity than if they faced in another direction. Solar panels on east or west facing balconies will benefit from direct sunlight in the morning or afternoon respectively, so they are still viable.

Are balcony-mounted solar panels a good choice?

One of the best things about balcony-mounted solar panels is their portability. While rooftop solar panels cannot be easily reinstalled in another house when moving, balcony systems can easily be packed away and moved to a different

location if you choose to relocate.

How many solar panels can be installed on a balcony?

People with particularly large balconies might be able to fit two 400 watt (W) panels, whereas the average roof will fit 10 350 W panels. Fewer panels also mean less electricity being generated. Most homeowners won't be able to power their whole home with balcony solar panels.
