## Overview

What is solar panel angle & why is it important?

The angle of your solar panels is an important aspect to consider when designing your system. Solar panel angle is also known as the vertical tilt of your solar panel system. For example, a solar panel array that's perpendicular to the ground has a 90-degree angle tilt.

What is the optimal tilt angle of photovoltaic solar panels?

The optimal tilt angle of photovoltaic solar panels is that the surface of the solar panel faces the Sun perpendicularly. However, the angle of incidence of solar radiation varies during the day and during different times of the year.

Why does solar panel orientation and angle matter in a solar power system?

Prior to understanding why solar panel orientation and angle matter in a solar power system, we need to know how a solar panel collects energy from the sun. Solar panel cells only collect a specific wavelength during absorbing radiant energy from the sun.

How should solar panels be angled?

To harness solar power more efficiently, solar panels should be angled to face the sun as closely as possible. Photovoltaic panels produce power efficiently when the angle at which the sun's rays hit the panel surface (known as the "angle of incidence") is small or when light hits the panel as close to a perpendicular angle as possible.

Should solar panels be angled on a low angled roof?

Flush-mounting solar panels on a low-angled roof will produce less electricity and reduce solar savings. To receive exceptional solar savings, you'll want your solar panels to be angled in a way that optimizes the sunlight exposure for that location. This is done by tilting your solar panels at the same angle as the latitude of your home.

What is the best angle for solar panels in the UK?

Generally speaking, the best angle for solar panels in the UK is about 35 degrees from horizontal, although this varies very slightly around the country. A study from 2021 revealed that the best angle for solar panels is typically somewhere between the latitude of the location and 15 degrees below that figure.
