

# Is the cost of connecting photovoltaic bracket to the grid high

## Overview

---

Why should a solar PV system be connected to the grid?

For financial benefit. Connecting your solar PV system to the grid allows you to take advantage of the FIT, which gives you a fixed amount of money for each kWh of electricity you generate. On top of these payments for energy generation, you also receive a sum of money for feeding any surplus energy into the grid.

How much electricity will a grid-connected PV system produce?

By the end of 2007 more than 130 grid-connected PV plants with a total capacity of about 4 500 kW will produce 4 000 MWh of electrical energy. Figure 51 shows the cost data from 11 grid-connected PV systems that were constructed in 2004 and 2005 for the utility ewz in Zürich as part its PV programme.

Do grid-connected PV systems improve performance over time?

The report shows the development of the actual PV system cost and the performance over time for grid-connected PV systems built between 1991 and 2005. The results for the grid-connected PV systems investigated show a trend towards lower system cost and increased performance over this period.

How does PV cost affect grid parity?

The price of PV is furthermore impacted by the continuous development and increasing installed capacity of PV. Therefore, a quantitative understanding of the timeline for PV cost is an important aspect to consider in discussions about grid parity.

How many grid-connected PV systems were built in 2004 & 2005?

Figure 51 shows the cost data from 11 grid-connected PV systems that were constructed in 2004 and 2005 for the utility ewz in Zürich as part its PV programme. Cost data of 11 PV system from the ewz green tariff PV

programme. of the 11 PV systems in Figure 51. PV systems are mounted on flat roofs.

How many grid-connected PV systems are in the IEA PVPS database?

In part two, the performance data from 461 grid-connected PV systems with a total of 1 544 operational years in the IEA PVPS Database are examined. Part three presents case studies on PV system cost, yield, performance and maintenance provided by Task 2 members on PV systems of their country.
