

# Japanese terminology for solar photovoltaic brackets

## Overview

---

What is the big solar energy glossary?

The Big Solar Energy Glossary defines and simplifies some of the top solar words, industry acronyms and green energy terms to help you more easily navigate the sector and make more informed decisions. All terms and acronyms are defined in the context of solar energy.

What is a photovoltaic solar system?

A Photovoltaic solar system. A linked collection of solar panels on a roof is called an 'array'. Power density is the amount of power per mass. PV inverters are measured by power density. The higher the power per mass, the better the inverter.

What is a photovoltaic thermal system?

Photovoltaic-Thermal (PV/T) System: A photovoltaic system that, in addition to converting sunlight into electricity, collects the residual heat energy and delivers both heat and electricity in usable form. Also called a total energy system.

What is a photovoltaic module?

Photovoltaic (PV) Module: The smallest environmentally protected, essentially planar, assembly of solar cells and ancillary parts, such as interconnections, terminals, (and protective devices such as diodes) intended to generate direct current power under unconcentrated sunlight.

What is a subsystem in a photovoltaic system?

Substrate: The physical material upon which a photovoltaic cell is applied.  
Subsystem: Any one of several components in a photovoltaic system (i.e., array, controller, batteries, inverter, load).

What is the difference between a PV array & a photovoltaic array?

Photovoltaic(s) (PV): Pertaining to the direct conversion of light into electricity.  
Photovoltaic (PV) Array: An interconnected system of PV modules that function as a single electricity-producing unit. The modules are assembled as a discrete structure, with common support or mounting.
