 **TAX FREE**    

**Product Model**  
HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

**Dimensions**  
1600\*1280\*2200mm  
1600\*1200\*2000mm

**Rated Battery Capacity**  
215KWH/115KWH

**Battery Cooling Method**  
Air Cooled/Liquid Cooled

**ENERGY STORAGE SYSTEM**

## Overview

What is 'Sunshine Project'?

"Sunshine Project" is to be promoted on a national scale with full cooperation from national research institute organs, universities and private enterprise, as well as through inter national cooperation with projects in other countries. Generally, the solar energy is highly expected as a new energy sources because of the following features.

Can a hierarchical porous hybrid film harvest solar energy for generation?

Here, we present a hierarchical porous hybrid film composed of nanofibres of cellulose on which conductive metal-organic frameworks have been layered to enable photothermal conversion and regulation of ion transport that can harvest solar energy for generation of electricity.

Will photovoltaic cells be made in Japan?

The photovoltaic cells will be manufactured in Japan and the glass will be manufactured with cooperation from local partners. I hope that we can spread our photovoltaic power generation glass to many countries." Advanced glass developed in Japan may come to change the windows and walls of the world.

Is a freestanding hybrid film suitable for solar power generation?

Solar energy fits well with the increasing demand for clean sustainable energy. This paper describes a freestanding hybrid film composed of a conductive metal-organic framework layered on cellulose nanofibres which enables efficient solar power generation.

Can Japan harness the potential of solar power?

Japan's efforts to harness the potential of solar power, a well-known renewable energy source, will shine a light on humanity's future. Japan is making steady progress toward the implementation of the groundbreaking technologies of both space-based solar power and flexible solar cells.

Does sunshine duration affect solar power generation?

On the other hand, sunshine duration has a positive coefficient estimate in all models, with estimates ranging from 92.941 in Column (4) to 159.444 in Column (3). This indicates that an increase in sunshine duration is associated with an increase in solar power generation. Table 2. OLS regression results.
