

Light in the sky right now

Overview

What can you see in the night sky?

The night sky tonight and on any clear night offers an ever-changing display of fascinating objects you can see, from stars and constellations to bright planets, the moon, and sometimes special events like meteor showers.

What is the interactive sky chart?

Powered by Heavens Above, our interactive viewer charts the night sky as seen by eye. The map includes the Moon, stars brighter than magnitude 5, the five bright planets (Mercury, Venus, Mars, Jupiter, and Saturn), and deep-sky objects that can be seen without the use of optical aid. [How Do I Use the Interactive Sky Chart to Explore the Night Sky?](#)

.

What does the all sky chart show?

This all sky chart shows the sky above your location and is updated in realtime. Please note that this map does not reflect the actual lighting conditions and it shows the main astronomical objects even during daylight. Stars up to magnitude 5 and Solar System objects brighter than magnitude 10 are shown in the chart.

What is a night sky map?

Whether you're using just your eyes, binoculars, or a telescope, the night sky offers endless wonders waiting to be discovered. Happy stargazing! This skymap is a dynamic visualization that displays the positions of celestial objects in the night sky for your specific location on the current date.

Will Mercury appear in the night sky in October 2024?

Mercury as it will appear in the night sky of October 2024. (Image credit: Chris Vaughan/Starry Night) Following its solar conjunction on Sept. 30, Mercury will

enter the western post-sunset sky.

Will Saturn appear in the night sky in October 2024?

Saturn as it will appear in the October 2024 night sky. (Image credit: Chris Vaughan/Starry Night) Saturn will be perfectly positioned for evening and late-night viewing during October because the planet will already be climbing in the east as the sky darkens after dusk.
