

# Lishui solar power generation screw

## Overview

---

What is the Lishui manufacturing project?

The Lishui manufacturing project is a crucial part of the company's ongoing strategic development planning, following the existing comprehensive industrial layout achieved with the backing of group resources, which includes PACK, BMS, EMS and PCS and covers all core equipment manufacturing apart from battery cells.

How much does China's energy storage project cost?

At a total investment of 8 billion yuan, the ambitious project is comprised of three sub-projects: a 2.45 billion yuan energy storage system integration base, a 4.65 billion yuan centralized PV power generation station and a 900 million yuan energy storage power station.

How cured semi-solid batteries will improve energy security in East China?

In June 2024, the world's first set of in-situ cured semi-solid batteries grid-side large-scale energy storage power plant project - 100MW/200MWh lithium iron phosphate energy storage project in Zhejiang, completed the grid connection, which will greatly enhance the safety and security of the power grid in East China.

How did Kehua achieve a high-performance energy storage system?

As the first pioneering project to combine semi-solid state batteries with energy storage system, Kehua adopted four 1.25MW high-performance energy storage converters, which were connected in parallel to a single 5,000kVA transformer, achieving a 35kV AC grid-connected output, which ensured the high efficiency and stability of power transmission.
