## Overview

---

Li<sub>2</sub>O was obtained from lithium peroxide (Li<sub>2</sub>O<sub>2</sub>, Alfa Aesar) by thermal decomposition. In detail, L.

The electrodes were assembled into a 2032 coin cell (Hohsen). The half cell was assembled by successively stacking a lithium foil anode (thickness, 0.4 mm), a glass fibre filter (.).

High-resolution TEM (HR-TEM) images were obtained using a JEM-2100 (HR) electron microscope. For the HR-TEM observations, the powders were subjected to ultrasound tre.

The in situ Raman spectra were recorded using a JASCO microscope spectrometer (NRS-1000DT). The 632.8-nm excitation light of an air-cooled HeNe laser was focused on the el.

A homemade cell for in situ online DEMS and a custom-built glass vessel for ex situ gas chromatography mass spectrometry were connected to an eight-port, two-way gas chromatogra.
