## Overview

---

We rank the 8 best solar batteries of 2023 and explore some things to consider when adding battery storage to a solar system.

Naming a single “best solar battery” would be like trying to name “The Best Car” – it largely depends on what you’re looking for. Some homeowners are looking for backup power, some are motivated.

Frankly, there is a lot to consider when choosing a solar battery. The industry jargon doesn’t help and neither does the fact that most battery features are things we don’t think about on a.

Are lithium-ion solar batteries worth the cost?

Despite a 30% tax credit and fast-falling prices, the price of lithium-ion solar batteries still gives many homeowners sticker shock, despite the clear long-term benefits of cost savings and peace of mind. In this article, we’ll explore the ins and outs of home battery pricing and six factors that influence the cost of a battery project.

How much does a lithium ion battery cost?

Lithium solar batteries typically cost between \$12,000 and \$20,000 to install. When paired with solar panels, excess solar energy can be stored in the battery and used later, like at night or during a power outage. Depending on the area, lithium ion batteries can even help save extra money on electricity bills.

What are the best lithium-ion solar batteries?

There are many lithium-ion solar batteries on the market. Some of the best solar battery brands include Enphase, Panasonic, and Tesla. The following table outlines some other popular lithium-ion solar batteries on the market: At \$682 per kWh of storage, the Tesla Powerwall costs much less than most lithium-ion battery options.

What is a lithium ion solar battery?

Lithium-ion solar batteries are deep cycle batteries, so they have DoDs around 95%. Compare this to lithium ion batteries, which have DoDs closer to 50%. Basically, this means you can use more of the energy that's stored in a lithium-ion battery and you don't have to charge it as often.

How much does a solar battery cost?

A fully-installed 12.5 kWh solar battery costs \$13,000 on average, after claiming the 30% tax credit. That cost is closer to \$10,500 if the battery is installed as part of a solar and battery project, as much of the soft costs (labor, permitting, inspection, interconnection, etc.) overlap.

Are lithium-ion batteries worth it?

Temperature sensitivity is another key consideration in determining whether using lithium-ion batteries for your solar panels is worth it. Lithium-ion solar batteries are significantly more sensitive to temperature, and in extreme climates, additional measures must be taken to protect the battery.
