

Luminox solar power

Overview

What is Luminor light technology (LLT)?

Luminor Light Technology (LLT) is a system that provides unmatched self-powered illumination lasting up to 25 years. Unlike other luminosity systems, which depend on exterior light sources to charge, the luminosity is built right into Luminor watches, allowing you to see the time, no matter the conditions.

Should Luminor watches be solar powered?

While there are some people who believe that all quartz watches should be solar-powered, requiring sunlight kind of goes against the whole point of Luminor watches, which is that they can remain fully functional and offer consistent luminescence for multiple years at a time in total darkness.

Are Luminor watches sustainable?

Luminor has been constantly revamping its production processes to help do our part for environmental sustainability. This includes partnering with a Swiss company to collect plastic and waste from the ocean and using those materials to create the #TIDE series of watches.

Does Luminor light technology need an external light source?

LLTs are self powered and do not need an external light source to “charge” in order to glow. Whereas Super-LumiNova® provides luminosity for 3.5-8 hours before requiring an external light source, Luminor Light Technology (LLT) offers self-powered illumination for up to 25 years.

What makes Luminor light technology unique?

As a result of its unique properties, Luminor Light Technology is unaffected by water, oil and most corrosive materials. The tubes undergo a labor-intensive manufacturing process, with quality control being a dominant part of the production. They are inspected for dimensions, brightness, temperature, thermal shock, and Tritium leakage.

What makes Luminox a good brand?

With CARBONOX™, Luminox creates high-tech timepieces with a very robust and hard-finished watch case that takes durability to a whole new level. Luminox has a long history with and has used this material for its watch cases and some straps since 2006. CARBONOX™ gives Luminox watches a black matte finish popular with special forces.

Luminox solar power

Sustainability @Luminox - Luminox United Kingdom

The electricity generated from solar energy covers up to 80% of our total annual needs and the remaining amount of energy is covered by green energy provided through a hydroelectric power plant. Mondaine saves around 77 tons of CO2 emissions every year.
