

Maximum size of a single photovoltaic panel

Overview

Household solar panel systems are usually up to 4kWp in size. That stands for kilowatt 'peak' output - ie at its most efficient, the system will produce that many kilowatts per hour (kWh). How many solar panels can you have in the UK?

What's the maximum number of solar panels you can have in the UK?

Assuming your property doesn't require planning permission for a solar installation, there is no legal maximum number of solar panels that you can install on your roof in the UK. Other than usable roof space, there is nothing limiting how many solar panels you can put up there.

How big should a solar panel be?

According to standard building regulations in the UK, there are a couple of requirements all solar panel installations need to abide by: Does not extend 200mm beyond the edge of the roof or wall. The solar array is not larger than 9m² and less than 4m in height. Is more than 5m away from the garden boundary. How heavy are solar panels?

.

How much space does a 350W solar panel take up?

In the UK, a standard 350W residential solar panel is around 1.89m long, 1m wide and 3.99cm thick and contains approximately 60 solar cells. This means that a 350W solar panel will take up around 1.89m² of roof space - although more efficient panels can be smaller but produce the same amount of power. What is solar panel wattage?

.

Do solar panels come in different sizes?

However, solar panels come in a range of different sizes, with varying levels of

efficiency and power outputs. In this guide we'll walk you through solar panel sizes, explain what panel wattage is, and help you to calculate exactly how many solar panels your home will need. Watt (W) = the amount of power the solar panels are capable of producing.

How many solar panels can I put up in my home?

Other than usable roof space, there is nothing limiting how many solar panels you can put up there. Listed buildings and properties in conservation areas usually require planning permission for solar panels, but for the majority of other homes a solar installation counts as a 'permitted development'.

Is solar panel size the same as solar array size?

As such, solar panel size shouldn't be confused with solar array (or, if you prefer, solar system) size.
